Dump4Exam@gmail.com

Question 1

You are a senior analyst using Claude to analyze requirements from several stakeholder sources. Which is the correct order of steps?
(1) Group related requirements and flag conflicts or ambiguities for stakeholder review.
(2) Validate the structured output against the original sources for accuracy and completeness.
(3) Submit the consolidated inputs to Claude with a structured extraction prompt.
(4) Gather and label the source materials so each requirement can be traced.
(5) Document the final requirements set with source traceability and status.

A. 3, 4, 1, 2, 5
B. 4, 3, 1, 2, 5
C. 1, 4, 3, 2, 5
D. 4, 1, 3, 2, 5

Correct Answer: B

Source materials must be gathered and labeled first (4), then submitted to Claude (3), then grouped/flagged (1), validated against sources (2), and finally documented (5). This preserves traceability end-to-end.

Question 2

A product manager is using Claude to ideate options for a new self-service portal. Their team needs breadth before narrowing and will evaluate trade-offs across the options in a separate session. Which prompting strategy fits this stage?

A. Request multiple distinct options and ask Claude to recommend the strongest one with reasoning, so the team starts the trade-off discussion from a leading candidate.
B. Request a single recommended option with strong reasoning, since well-reasoned single options give the team a clearer starting point than several weakly-reasoned alternatives.
C. Request multiple distinct options ordered by Claude's assessment of feasibility, so the team can focus its trade-off discussion on the most feasible options first.
D. Request multiple distinct options with stated trade-offs, and avoid committing to a single recommendation in this round.

Correct Answer: D

At the ideation / breadth stage the goal is to surface diverse options with explicit trade-offs. Committing to a single recommendation or ranking by feasibility too early narrows the solution space prematurely.

Question 3

You are designing a checklist for evaluating Claude outputs and must complete the upstream steps before scoring an output. Which two steps must be completed BEFORE scoring a Claude output against the checklist? (Select two.)

A. Specify the threshold that distinguishes acceptable from unacceptable output.
B. Forward unacceptable outputs to a senior reviewer for second-pass review.
C. Document the final scoring rubric and reviewer comments for the audit trail.
D. Promote the approved output into the downstream production process.
E. Define the evaluation criteria that matter for the task at hand.

Correct Answer: A & E

Before any scoring can occur you must first define what "good" looks like (evaluation criteria) and the pass/fail threshold. Downstream actions such as forwarding or documenting happen after scoring.

Question 4

You are an operations lead choosing actions when a Claude conversation has degraded in quality. Which recovery action should be tried first when conversation quality degrades?

A. Escalate to a senior architect for a manual review of the conversation history.
B. Replace the model with a different vendor's model right away.
C. Discard the entire conversation and rebuild the work from the original prompt.
D. Summarize the current state and continue with a focused follow-up prompt.

Correct Answer: D

The least disruptive and most efficient first recovery is to summarize the current state and issue a focused follow-up prompt. Escalation, model switching, or full restart are heavier steps reserved for later.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 5

You are an analyst working on a one-off complex problem that genuinely requires multi-step reasoning over an extended chain of thought. Which model is best suited to this work?

A. Haiku, because lightweight models are generally preferred for cost and speed, even on tasks that need extended reasoning.
B. Opus, because it is positioned as the most capable for advanced reasoning on complex specialized tasks.
C. Sonnet, because most tasks perform equally well on the mid-tier model regardless of reasoning complexity.
D. Sonnet, because its balanced reasoning is generally adequate and avoids the higher latency associated with Opus.

Correct Answer: B

Opus is Anthropic's highest-capability model and is the recommended choice when the task truly needs deep, multi-step reasoning. Cost and latency are secondary for one-off complex work.

Question 6

You are reviewing colleagues' responses to feedback received on Claude-drafted communications. Which two feedback responses are productive? (Select two.)

A. deferring all feedback to a later revision cycle to avoid disrupting the current draft's consistency
B. incorporating all feedback received, including contradictory suggestions, into the next draft simultaneously
C. mapping each piece of feedback to the specific change made in the next draft
D. asking clarifying questions when feedback is ambiguous before acting on it
E. declining to revise Claude-generated sections on the basis that the model's output should be trusted as written

Correct Answer: C & D

Productive responses map feedback to concrete changes and clarify ambiguity before acting. Blindly incorporating everything, deferring everything, or refusing to revise are unproductive.

Question 7

A learning specialist is configuring a Project for course-design work. Their organization has an internal instructional-design standard and a preferred output structure for lesson outlines. Which custom-instruction set best supports this use case?

A. Name Claude's role as a course designer, require alignment to the organization's instructional-design standards, and specify the preferred output structure for lesson outlines.
B. Name Claude's role as a course designer; let each chat's prompt specify the standards and output structure for that lesson, since lessons vary widely.
C. Specify only the preferred output structure for lesson outlines, since the structure carries the standards implicitly and naming the role adds no value.
D. Name Claude's role as a course designer and require alignment to the organization's instructional-design standards; leave output structure to Claude based on the topic of each lesson.

Correct Answer: A

Project-level custom instructions should lock in role, mandatory standards, and the expected output format so every conversation inherits the same guardrails without repetition.

Question 8

You are writing system-level instructions for a Project that supports recurring writing tasks. Which step should be performed first when writing the system-level instructions?

A. Validate the drafted instructions against representative requests for the Project.
B. Define the purpose of the Project and the boundaries the instructions must respect.
C. Refine the drafted instructions based on observed gaps from validation runs.
D. Draft the system-level instructions using a template from a similar existing Project.

Correct Answer: B

Purpose and boundaries must be defined first; they are the foundation for every subsequent drafting, validation, and refinement step.

Question 9

Preparing a stakeholder communication about a proposed Claude use case, a senior manager is applying the AI Fluency Framework Description competency. Which framing best reflects Description principles for stakeholder communication?

A. Emphasize the most successful examples of what Claude has produced for similar use cases, and let the audience's enthusiasm carry the case for approval.

B. Describe what Claude can reliably produce for the use case in detail, and address the human oversight only if a stakeholder raises the question directly.

C. Describe what Claude can reliably produce for the use case, the known limitations, and the human oversight that will remain, calibrated to the audience's familiarity with AI.

D. Describe only the most conservative, worst-case capabilities of the use case, reserving the stronger results as a pleasant surprise once the pilot is underway.

Correct Answer: C

Description requires balanced, calibrated communication: reliable capabilities, known limitations, and the human oversight that remains. Over-selling successes or under-selling capabilities both violate the principle.

Question 10

A knowledge worker used the Google Drive connector and asked Claude to summarize a recently revised policy document. The summary reflects the prior version of the document, not the revision saved three hours earlier. Which factor most likely explains this?

A. The connector cached the prior version of the document at the start of the chat session, and will continue to use the cached version until the chat is closed.

B. The associate's permissions on the document allow access only to the prior version, since the revision is held in a separate permission group until publication.

C. The connector retrieved both versions, and Claude selected the earlier one because it was longer and contained more material relevant to the prompt.

D. The connector's index has not yet refreshed to reflect the recently revised document, so the older indexed content is still being referenced.

Correct Answer: D

Connectors rely on an index that is refreshed periodically. A change made only a few hours earlier may not yet be visible to Claude until the index updates.

Question 11

You are an operations lead sorting proposed Claude use cases by whether they are acceptable for your team to pursue with Claude. Which two proposed use cases are acceptable for the team to pursue with Claude? (Select two.)

A. drafting a preliminary symptom summary to support a clinician's diagnostic review

B. drafting an internal training summary from approved internal documentation

C. drafting a legal summary an attorney reviews before sharing with a client

D. synthesizing themes across approved customer feedback under aggregation rules

E. summarizing performance review notes to determine promotion decisions across a team

Correct Answer: B & D

Internal training summaries from approved docs and aggregated, non-identifying customer-feedback synthesis are low-risk, fully human-supervised tasks. Medical, legal-client, and employment decisions carry higher stakes and are generally out of scope without additional controls.

Question 12

A workflow analyst is designing a hand-off between Claude and a human reviewer in an existing process. The reviewer needs to know what is in scope for their review. Which hand-off design is most appropriate?

A. Allow each reviewer to determine their own review criteria based on their experience, since reviewers know best what to check in their domain.

B. Use a checklist that the reviewer fills in for every output, with the checklist generated by Claude based on the specific content of each output.

C. Define explicit criteria for what Claude produces and what the human reviewer must check before approval, documented in the workflow.

D. Define explicit criteria for what Claude produces and leave the reviewer's checks unspecified so the reviewer can apply judgment without constraint.

Correct Answer: C

Clear, documented criteria for both the model's output and the human's review responsibilities create a reliable, auditable hand-off. Leaving either side undefined invites inconsistency and missed risks.

Question 13

You are an HR specialist sorting potential ethical risks of a Claude-supported workflow. Which two risks pose the highest ethical concern in an HR-adjacent workflow? (Select two.)

A. decisions that materially affect a person's employment without human accountability

B. inconsistent tone and formatting across internal HR communications sent to employees

C. outputs that systematically disadvantage members of a protected group

D. inconsistent use of the company's preferred dash style across documents

E. a clerical typo in a routine internal calendar invitation

Correct Answer: A & C

Employment decisions without human accountability and systematic bias against protected groups are high-severity ethical risks. Tone, dash style, and typos are quality issues, not ethical ones.

Question 14

A sales manager is iterating on a Claude-generated solution prototype after a stakeholder review identified two specific concerns. The rest of the prototype was accepted as written. Which iteration approach is most likely to produce a strong next version?

A. Address the two specific concerns and add a third improvement the sales manager identified.

B. Rewrite the prototype from scratch incorporating the two specific concerns.

C. Address the two specific concerns directly, leave unrelated parts unchanged, and document the changes for the next review.

D. Address the two specific concerns and also revise unrelated sections to maintain consistent voice across the prototype after the edits.

Correct Answer: C

Targeted fixes preserve the already-accepted content and keep the change set small and reviewable. Adding extra improvements or rewriting from scratch risks introducing new issues and obscuring the original feedback.

Question 15

A manager is monitoring a Project's effectiveness over time. The Project has been in use for several months and supports a recurring workflow. Which signal most directly suggests the configuration needs updating?

A. The Project's outputs increasingly reference terminology, sources, or guidance that no longer reflects current practice.

B. The Project's chat volume has decreased steadily over the past several weeks compared to the prior baseline.

C. The Project's members have started using ad-hoc chats outside the Project for tasks within the Project's scope.

D. The Project's outputs have grown longer on average than the outputs produced when the Project was first configured.

Correct Answer: A

Outdated terminology or sources is a direct quality-drift signal that the Project's knowledge or instructions no longer match current reality. Volume or length changes are weaker, indirect indicators.

Question 16

A knowledge worker is explaining context-window basics to a teammate. Which statement most accurately describes a context window?

A. the complete conversation history retained across sessions, which the model can reference whenever it produces a response in any chat.

B. an adjustable setting that determines how much of the conversation history the model includes in each response, configurable per chat.

C. a bounded amount of text the model can consider at once, including the conversation history, attached documents, and the current input.

D. the subset of the conversation that the model determines is most relevant to the current input, which can be smaller than the full conversation.

Correct Answer: C

The context window is a fixed token budget that includes everything the model can see in a single turn: system prompt, history, attachments, and the latest user message. It is not session-persistent or user-adjustable per chat.

Question 17

When refining a Claude output that does not meet expectations. Which iterative refinement step should be performed first?

A. Submit the revised prompt and capture the new output.

B. Compare the new output against the original criteria.

C. Identify the specific weaknesses in the current output.

D. Modify the prompt to address each identified weakness.

Correct Answer: C

You cannot usefully revise a prompt until you know exactly what is wrong with the current output. Diagnosis always precedes intervention.

Question 18

You are handling a document containing mixed-sensitivity content before using it with Claude. Which data-handling step should be performed first?

A. Submit the redacted document to Claude for the intended task.

B. Classify the content of the document and identify which fields are sensitive.

C. Redact sensitive fields and replace them with appropriate placeholders.

D. Review the redacted document with a peer to confirm the redaction is complete.

Correct Answer: B

Classification comes first: you must know what is sensitive before you can redact it, review the redaction, or submit anything to the model.

Question 19

A project manager is transforming a Claude-generated draft into a polished board memo. The board reads the memo before the meeting and expects it to be scannable, factually verified, and consistent with the organization's standard terminology. Which set of refinements is most appropriate?

A. Apply consistent headings, tighten wording for executive scannability, align terminology with the organization's standards, and verify each fact against source data.

B. Apply consistent headings and align terminology with the organization's standards; rely on Claude's verification of facts, since the draft was generated from the source data.

C. Apply consistent headings, expand each section to give the board full context, and align terminology with the organization's standards.

D. Tighten wording for executive scannability and verify each fact against source data; leave heading structure and terminology as written to preserve the draft's voice.

Correct Answer: A

Board-level documents require scannable structure, verified facts, and organization-standard language. Relying on the model's own fact-checking or expanding length works against those requirements.

Question 20

A knowledge worker has noticed that the same prompt for a recurring weekly task produces inconsistent outputs across runs. Some weeks the output uses the right sections but the wrong tone; other weeks the tone is right but a section is missing. The source inputs change each week but follow the same structure. Which cause is most worth investigating first?

A. The team should split the prompt into separate prompts for tone and structure, since combining both in one prompt produces the mixed inconsistency the team is seeing.

B. The model is non-deterministic, so identical prompts naturally produce different outputs even when the prompt itself is well-written, and the team should accept the variation.

C. The recurring prompt under-specifies the audience, tone, format, and required sections, so each run drifts depending on what the model emphasizes that turn.

D. The source inputs vary too much from week to week, and the team should standardize the inputs before changing the prompt.

Correct Answer: C

When the same prompt yields different structural or tonal results, the most common root cause is insufficient specification of the required elements. Tightening the prompt is the first, lowest-cost investigation.

Question 21

A knowledge worker is adjusting an approach after a successful pilot revealed two opportunities for further improvement. The pilot's core results were positive, and the team is preparing for a broader rollout. Which adjustment is most appropriate?

A. Run a second pilot focused only on the two opportunities, then combine the results of both pilots before rolling out the approach.

B. Adopt the changes that worked, address the two specific opportunities, and run a controlled comparison before broader rollout.

C. Adopt the changes that worked, address the two opportunities, and monitor results closely during the broader rollout.

D. Roll out the approach as piloted and address the two opportunities in a separate follow-up project after the rollout completes.

Correct Answer: C

When the pilot already succeeded, the practical next step is to incorporate the improvements and proceed to broader rollout with close monitoring rather than delaying for another full pilot cycle.

Question 22

You are a knowledge worker preparing inputs for a Claude prompt. Which data type most clearly requires extra handling such as redaction or anonymization before being included in the prompt?

A. generic product descriptions available on the company's marketing site

B. public press releases the company has already published

C. job titles taken from the company's public organizational chart

D. customer government identifiers and full payment-card numbers tied to named individuals

Correct Answer: D

Government IDs and full payment-card numbers linked to individuals are highly sensitive PII/PCI data and must be redacted or excluded before any model interaction.

Question 23

A senior manager is reviewing a colleague's habit of never updating their team's Project configurations because "if it works once, it works forever." Which feedback is most warranted?

A. Configurations should be updated on a fixed schedule, since regular maintenance prevents drift even when nothing about the policies or source documents has changed.

B. Configurations should be left alone if the team is satisfied with current outputs, and any required updates should be handled at the chat level rather than the Project level.

C. Configurations should be reviewed and updated periodically because policies, terminology, and source documents change over time, even when output quality has not visibly degraded.

D. Configurations should be updated only when output quality visibly degrades, since proactive updates risk introducing regressions in working configurations.

Correct Answer: C

Projects drift as the real world changes. Periodic review keeps instructions, knowledge, and standards current even before quality visibly declines.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 24

A Claude associate is reviewing a Claude-drafted set of customer-segment descriptions for an internal marketing brief. One description applies a generalization about a demographic group's purchasing behavior that does not hold for individual customers in the segment. Which response is most appropriate?

A. Add a disclaimer to the description, noting that the generalization may not apply to all individuals in the segment, and keep the underlying description unchanged.

B. Revise the description to focus on observed behaviors rather than generalizations about people, and validate the revision against actual customer data.

C. Remove the entire customer-segment description from the brief, since any segmentation that involves demographic characteristics is likely to introduce similar issues.

D. Keep the description as written for the internal brief, since internal use does not carry the same risk as external publication of demographic generalizations.

Correct Answer: B

Best practice is to replace demographic generalizations with observable, data-backed behaviors. Disclaimers or "internal-only" excuses do not fix the underlying accuracy and fairness problem.

Question 25

You are a knowledge worker who decomposed a "draft a board memo" request into fifteen tiny steps and noticed the output now feels disjointed because related ideas were split apart. Which adjustment is most appropriate?

A. Consolidate related steps into fewer cohesive sections that group naturally connected ideas.

B. Group the fifteen steps by the order they appear rather than by which ideas they share.

C. Reduce the step count by merging steps that occur near each other in sequence.

D. Add short headings above each of the fifteen steps to visually separate them into named categories.

Correct Answer: A

Over-decomposition fragments related content. Re-grouping by conceptual cohesion restores narrative flow while still keeping the task manageable for the model.

Question 26

An HR associate is preparing to use Claude on a sensitive personnel matter. The organization's AI policy explicitly states that information related to ongoing investigations must not be entered into AI tools. Which response best aligns with the policy?

A. Escalate the matter to HR leadership for an approved alternative, and do not enter investigation-related information into Claude in the meantime.

B. Enter the investigation-related information into Claude in an Incognito chat, since Incognito chats do not retain information and therefore fall outside the policy's intent.

C. Enter the investigation-related information into Claude only after the investigation closes, since the policy applies during the investigation period.

D. Enter a paraphrased version of the investigation-related information that removes identifying details, since paraphrasing addresses the spirit of the policy.

Correct Answer: A

When policy expressly prohibits a class of data, the only compliant action is not to enter it and to escalate for an approved alternative. Incognito, paraphrasing, or waiting do not override an explicit ban.

Question 27

An analyst has been asked to compute summary statistics from an uploaded sales data file and produce a chart for a weekly report. Which output approach best fits the task?

A. Request a narrative description of the data in the chat response, describing the general trends without computing exact values.

B. Produce a written description of what the chart would show, in place of generating the actual visualization.

C. Ask Claude to estimate the summary statistics from a brief preview of the file rather than the complete uploaded dataset.

D. Use Code Execution to perform the calculations and generate the chart, then verify the computed results against the source data before sharing the output.

Correct Answer: D

Deterministic numeric work and chart generation belong in the Code Execution environment, followed by human verification of the results against the source data.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 28

You are evaluating a Claude output that appears to contain hallucinated content. Which response step should be performed first when a hallucination is suspected?

A. Pinpoint the specific claim that appears to be unsupported by available evidence.
B. Document the hallucination pattern in the team's risk register for future reference.
C. Notify the user community that the output contains a hallucinated claim.
D. Discard the entire output and regenerate the output with a fresh prompt.

Correct Answer: A

The first action is always localization: identify exactly which claim lacks support. Only after the claim is isolated can you decide whether to correct, discard, or escalate.

Question 29

You are a compliance specialist applying the organization's policy to a proposed Claude use case. Which policy-application step should be performed first?

A. Document the use case and the policy decision in the compliance register.
B. Approve, modify, or reject the proposed use case based on the comparison.
C. Compare the proposed use case against the applicable policy provisions.
D. Identify which policy provisions apply to the proposed use case.

Correct Answer: D

You must first determine which policy clauses are relevant before you can compare the use case against them or reach a decision.

Question 30

After importing context from another AI platform into Claude's Memory, a knowledge worker notices that some imported details did not appear in subsequent responses. Which explanation is most accurate?

A. Memory imports are experimental, and Claude might not successfully incorporate all imported content; missing details can be added manually through Settings → Capabilities as a fallback.
B. Imported memories are stored separately from regular memories and cannot be referenced in any chat, so missing details reflect an architectural separation rather than imperfect import incorporation.
C. Memory imports overwrite all prior memories on completion, so any details that appear missing must have been deleted by the import process rather than not incorporated during the import itself.
D. The import transfers every detail as a rule, and any missing content reflects a deliberate choice by Claude to omit the information rather than the documented experimental nature of imports.

Correct Answer: A

Anthropic documents Memory imports as experimental; incomplete incorporation is a known possibility, and the recommended recovery path is manual addition via Settings.

Question 31

A Claude associate is applying the AI Fluency Framework Diligence competency to ongoing Claude usage. Which practice best reflects Diligence in a governance context?

A. Apply the organizational AI policies only in high-visibility situations where usage is likely to be observed or reviewed by others.
B. Apply organizational AI policies during onboarding as a foundational training step, document that each associate has reviewed them, and treat that record as evidence of ongoing compliance.
C. Defer all policy application to a centralized compliance team, treating individual usage as outside personal responsibility.
D. Apply organizational AI policies consistently as a sustained professional habit, identify gaps between actual usage and the policies, and take corrective action to close those gaps over time.

Correct Answer: D

Diligence is an ongoing professional habit of aligning one's own practice with policy, spotting gaps, and closing them—not a one-time onboarding checkbox or something delegated away.

Question 32

A knowledge worker is explaining the cost, speed, and quality trade-offs across Claude models to a colleague. Which generalization correctly describes the trade-off?

A. More capable models generally consume less of the rate limit because their reasoning is more efficient, even though they run more slowly than lighter models.

B. More capable models generally consume more of the rate limit and run more slowly, while lighter models are faster and consume less of the rate limit.

C. Lighter models consume more of the rate limit per request than more capable models, since lighter models require multiple passes to match heavier-model quality.

D. Speed and rate-limit consumption are independent of model capability; the difference between Haiku, Sonnet, and Opus is reasoning depth alone.

Correct Answer: B

Higher-capability models (Opus) are slower and consume more of the rate limit; lighter models (Haiku) are faster and cheaper per request. That is the core trade-off.

Question 33

You are an analyst fact-checking a Claude-generated report. Two cited sources give conflicting dates for the same event. Which approach is correct?

A. Choose the more recent date on the basis that later sources typically reflect updated or corrected information.

B. Locate a primary or authoritative source for the event and use the date that source confirms.

C. Average the two conflicting dates and use the average, treating a midpoint as a reasonable stand-in for verification.

D. Use the date confirmed by whichever source carries the more detailed citation for the event.

Correct Answer: B

When secondary sources conflict, resolve the discrepancy by consulting a primary or authoritative source rather than heuristics such as recency or citation length.

Question 34

You are a project manager designing a checklist for prompt-quality reviews. Which two items belong on the prompt-quality checklist? (Select two.)

A. whether the prompt uses the author’s favorite opening phrase as a signature

B. whether the prompt reaches a thousand words, whatever it actually says

C. whether the prompt provides relevant context including audience and goal

D. whether the prompt states a specific task with the required deliverable

E. whether the prompt includes the names of every person in the department

Correct Answer: C & D

A high-quality prompt must state a clear task/deliverable and supply the context (audience, goal, constraints) needed to produce a useful result. Length quotas or personal stylistic quirks are not quality criteria.

Question 35

You are a communications manager validating a Claude-generated newsletter that includes a specific industry growth figure. The figure appears in three trade-press articles, but none of them link to the underlying study. Which validation step is correct?

A. Locate the original study referenced by the trade-press articles and verify the figure in the primary source.

B. Accept the figure because three trade-press articles repeat the same number independently of one another.

C. Use the highest figure across the three articles to make the newsletter more compelling.

D. Remove the source attribution and present the figure as common knowledge already familiar to the newsletter’s readers.

Correct Answer: A

Secondary repetition is not verification. The correct step is to locate and check the primary study that originated the number.

Question 36

A knowledge worker has asked Claude to produce a one-page operating procedure. The team will edit the procedure, reuse it across multiple onboarding cycles, and update it when the underlying process changes. Which output format is most appropriate?

A. Generate the procedure as the chat response and save the entire chat transcript to the team's document store as the working reference.

B. Generate the procedure as an Artifact, which the team can open, edit, and save as a stable reference for ongoing use.

C. Generate the procedure as the chat response and copy the text into the team's document store after each revision.

D. Generate the procedure as a series of numbered steps in the chat and keep the chat itself as the reference for future edits.

Correct Answer: B

Artifacts are designed to be durable, editable, versionable documents—exactly the properties needed for a living operating procedure that will be reused and updated.

Question 37

You are a marketing manager using Claude to research a new market segment. Which research step should be performed first?

A. Define the specific research questions that must be answered for the segment.

B. Submit a series of Claude prompts to gather information across the segment.

C. Validate the gathered information against authoritative external sources.

D. Generate a final research report combining every Claude output produced.

Correct Answer: A

Research begins with clear questions. Without them, subsequent prompting, validation, and reporting lack focus and success criteria.

Question 38

A senior sales manager is presenting Claude's role in a project to a non-technical executive sponsor. The sponsor will be asked to approve continued investment based on the presentation. Which framing best balances value and limitations?

A. Describe the limitations first to set expectations, then explain how the team works around each limitation to deliver the project outcomes despite them.

B. Describe Claude's capabilities in technical terms so the sponsor understands the underlying model, and let the sponsor draw their own conclusions about value and limitations.

C. Describe what Claude does well and tie it to the project outcomes; defer discussion of limitations to a follow-up conversation to keep the approval discussion focused.

D. Describe what Claude does well, name the limitations the team will manage with human review, and tie both to the project outcomes the sponsor cares about.

Correct Answer: D

Balanced framing presents both strengths and the human-managed limitations in the same narrative, always linked to the outcomes the sponsor cares about. Hiding limitations or leading with pure caveats both undermine trust.

Question 39

You are a project manager reviewing Claude usage approaches that teammates have proposed for a project workflow. Which two workflow steps are well-suited for Claude support? (Select two.)

A. approving a final external press release without any human review

B. drafting a structured project status update from a set of meeting notes

C. synthesizing a literature review across many uploaded research documents

D. deciding promotion outcomes for staff based solely on the model's judgment

E. issuing legally binding contractual commitments on behalf of the company

Correct Answer: B & C

Drafting status updates and synthesizing literature are classic high-value, human-supervised Claude tasks. Approving external communications, employment decisions, or binding contracts without human review are out of scope.

Question 40

You are a customer-success manager considering whether to escalate a Claude-generated response. Which factor most strongly raises the impact of the output and supports escalation before external use?

A. The response is an unchanged draft for a paying customer that includes a service-level commitment.
B. The response is an internal draft summarizing the associate's notes from a customer call for their own reference.
C. The response is a casual rephrasing of an internal team status update.
D. The response is a brief internal announcement about an upcoming team all-hands meeting.

Correct Answer: A

An external customer-facing draft that contains a service-level commitment carries material commercial and reputational risk and therefore warrants escalation before release.

Question 41

An support representative is configuring a Project for drafting customer-facing apology emails after service outages. The current custom instructions tell Claude to "be empathetic and casual, keep it short, and offer a goodwill credit." The customer-service team has flagged that recent drafts have been too brief, have offered goodwill credits in cases where policy does not allow them, and have used contractions that the brand voice guide prohibits. Which adjustment best aligns the configuration to the use case?

A. Keep the existing instructions and add a sentence telling Claude to consult the brand voice guide and the goodwill-credit policy that are attached to the Project knowledge base.
B. Replace "be empathetic and casual" with "match the brand voice guide," remove the instruction to offer goodwill credits, and let each draft determine its own length based on the incident.
C. Move the brand voice guide and the goodwill-credit policy into the Project knowledge base and rely on the documents alone to govern tone, length, and credit decisions, without changing the custom instructions.
D. Specify the brand voice attributes (empathetic, formal, no contractions), set a minimum length, and instruct Claude to recommend a goodwill credit only when the attached eligibility policy permits one.

Correct Answer: D

Explicit, concrete instructions that encode the brand attributes, length expectation, and the policy-gated credit rule give the model clear, enforceable constraints instead of relying on it to "consult" documents.

Question 42

A customer-success team member is reviewing a Claude-generated customer health-check report against the agreed deliverable list. The report covers all five required topics, but the renewal-risk section names only one risk factor where the deliverable specification calls for renewal risk to be assessed across pricing, product fit, and stakeholder change. Which conclusion is best supported?

A. The report meets the topic-level requirements but the renewal-risk section is under-scoped against the specification and should be expanded before delivery.
B. The report meets the deliverable specification because all five required topics appear and the renewal-risk section is present in the output.
C. The report's completeness cannot be assessed from the deliverable specification alone; the customer should review the output and confirm whether the renewal-risk depth is sufficient.
D. The report does not meet the deliverable specification because a section that addresses only one of three required risk dimensions counts as a missing section.

Correct Answer: A

Presence of a section is not enough when the specification requires multi-dimensional coverage. The section exists but is incomplete relative to the stated requirements and needs expansion.

Question 43

You are an analyst reviewing a Claude response that addresses two of three required questions and skips the third. Which prompt element most likely needs strengthening?

A. The role assigned to Claude should be changed to a more specialized expert persona to increase response depth.
B. The output format should be revised to allow Claude to determine the appropriate structure for each question's answer.
C. The context provided to Claude should be expanded with additional background detail about the subject matter.
D. The task statement should explicitly enumerate the three required questions and require an answer to each.

Correct Answer: D

When the model skips a required element, the most direct fix is to make that element an explicit, non-optional part of the task statement.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 44

As part of a workflow redesign, a process analyst is applying the AI Fluency Framework Delegation competency. Which two criteria most directly inform Delegation decisions? (Select two.)

A. The visual complexity of the workflow diagram, since steps with more connections and dependencies are more likely to require human oversight.

B. The seniority of the team member who currently performs the step, since more senior roles typically involve higher-stakes tasks that warrant human retention.

C. The length of time the workflow has existed in its current form, since well-established processes have been sufficiently validated for AI delegation.

D. The need for human creativity, empathy, or judgment in the step, which indicates whether the task is appropriate for AI delegation or requires the human capabilities Claude cannot provide.

E. The reversibility of the task and the consequence of an error, which together indicate whether the step is safe to attempt with Claude or should be retained for human decision-making.

Correct Answer: D & E

Delegation decisions turn on whether the step requires uniquely human capabilities and on the risk profile (reversibility × consequence). Visual complexity, seniority, or process age are not the primary criteria.

Question 45

A learning specialist is configuring a Claude Project for a recurring course-design workflow. Which configuration approach best leverages a Skill alongside other Project elements?

A. Upload the supporting knowledge sources but leave the relevant Skill disabled, relying on custom instructions alone.

B. Configure the Project with custom instructions that describe a different workflow than the one the Skill documents.

C. Add the relevant Skill to the Project, upload the supporting knowledge sources, and write custom instructions that reference both the Skill and the knowledge.

D. Add the Skill and the supporting knowledge sources to the Project, but write custom instructions for a general use case unrelated to the recurring course-design workflow the Skill documents.

Correct Answer: C

Skills, knowledge, and custom instructions work best when they are deliberately aligned and cross-referenced so the model receives a coherent set of guidance for the intended workflow.

Question 46

You are a project lead at Zentari Traders aligning a model choice to a new recurring workflow. Which is the correct order of alignment steps?

(1) Run a representative sample on the candidate model and measure quality, latency, and rate-limit consumption.
(2) Select the lightest model that consistently meets the bar across the sample.
(3) Define the quality bar, latency tolerance, and expected volume for the workflow.
(4) Choose a candidate model based on the requirements profile.
(5) Retest the choice when a new model becomes available.

A. 3, 1, 4, 2, 5

B. 3, 4, 1, 2, 5

C. 4, 3, 1, 2, 5

D. 1, 3, 4, 2, 5

Correct Answer: B

Requirements must be defined first (3), then a candidate chosen (4), then measured on a representative sample (1), then the lightest model that still meets the bar selected (2), with periodic retesting (5).

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 47

You are a Claude associate troubleshooting a Claude response that introduces facts not present in the supplied source. Which root cause is most directly indicated?

A. The prompt's heading-based structure encourages Claude to generate placeholder content under each heading even when the source doesn't cover it.

B. The prompt does not constrain Claude to use only facts present in the supplied source.

C. The prompt asks for a comprehensive response, which leads Claude to fill perceived gaps with plausible-sounding but invented detail.

D. The prompt asks Claude to act as a researcher rather than a writer.

Correct Answer: B

When the model invents facts, the most direct cause is the absence of an explicit constraint to stay inside the provided source material.

Question 48

A finance consultant is adapting a Claude-generated narrative for a quarterly investor update. Investors have a fixed time window for the call and expect the headline result and forward outlook to be clear early. Which adaptation is most appropriate for this audience?

A. Lead with the forward outlook, since investors are most interested in what comes next, and present the headline result and drivers afterward.

B. Lead with the headline result, present the key drivers concisely, and close with the forward outlook.

C. Lead with a chronological recap of the quarter's events, reaching the headline result only near the end, then close with the outlook.

D. Lead with the quarter's operational highlights, present the financial result in the middle for context, and close with the forward outlook.

Correct Answer: B

Time-constrained investors need the bottom-line result first, then the concise drivers that explain it, then the forward view. Chronological or operational-first structures bury the information that matters most.

Question 49

You are validating evaluation criteria proposed for a Claude-generated business brief. Which two criteria are valid for evaluating a Claude-generated brief? (Select two.)

A. presence of an executive summary section as a structural completeness check

B. factual accuracy of the claims made against the supplied source material

C. total word count of the output relative to industry benchmarks for business briefs

D. consistency of the writing style with the organization's established tone guidelines

E. alignment of the output with the requested format and length constraints

Correct Answer: B & E

Factual accuracy against sources and fidelity to the requested format/length are core quality criteria. Presence of a particular section, industry word-count norms, or style consistency may be secondary but are not the primary validity checks listed here.

Question 50

A marketing manager is preparing a constrained brainstorming task: produce ten campaign ideas, each tied to a stated audience segment, and each fitting one of three defined budget bands. Which prompting approach fits the task?

A. Ask Claude for thirty ideas with the audience and budget constraints stated in the prompt, then keep the strongest ten as a wider initial pool produces stronger finalists.

B. Ask Claude for ten distinct ideas without budget constraints, then filter the output afterward to keep only the ideas that fit the three budget bands.

C. Ask Claude for ten distinct ideas with the audience and budget constraints stated in the prompt and require each idea to name which audience and budget band it addresses.

D. Ask Claude for ten distinct ideas, stating the audience constraints in the prompt and leaving budget unconstrained so creativity is not limited at the ideation stage.

Correct Answer: C

When the constraints are part of the success criteria, they belong in the prompt itself and each idea should explicitly declare how it satisfies them. Post-filtering or unconstrained generation wastes effort and risks non-compliant ideas.

Question 51

A finance manager must select a Claude feature for a task that requires deterministic calculations across a multi-tab spreadsheet. Which selection best fits the requirement?

A. Use a standard chat prompt, which passes the spreadsheet contents to the model and asks it to compute the totals across every tab.

B. Use the Research feature, which gathers figures from multiple sources and assembles them into a summary the manager can review.

C. Use an Artifact, which renders the calculations as a stable, editable document the manager can revise across turns.

D. Use Code Execution, which runs code in a sandbox to perform calculations on the uploaded file and produce verified outputs the associate can check.

Correct Answer: D

Deterministic multi-tab calculations belong in the Code Execution sandbox, where actual code runs against the file and results can be verified, rather than relying on the language model's arithmetic.

Question 52

You are a content creator. A first response from Claude is accurate but uses inconsistent terminology that does not match your organization's glossary. Which iterative change addresses the issue most directly?

A. Generate the response first, then manually find-and-replace mismatched terms afterward instead of supplying the glossary up front.

B. Ask Claude to choose terminology it judges most appropriate, without referencing the organization's established glossary.

C. Provide the organization's glossary and instruct Claude to use only those terms throughout the response.

D. Ask Claude to review the response for consistent terminology without providing the organization's glossary as a reference.

Correct Answer: C

Supplying the glossary and explicitly requiring its exclusive use is the most direct way to eliminate terminology drift at generation time.

Question 53

An operations assistant is using Claude to support process optimization for an existing intake workflow. The assistant has access to the current process documentation and recent cycle-time data. Which activity best uses Claude to support this process optimization task?

A. Map the current intake process, identify likely bottlenecks based on the cycle-time data, and propose optimization options for human review.

B. Apply Claude to predict the cycle-time impact of each proposed change and rank them so the team can implement improvements in priority order.

C. Use Claude to interview each team member who works on the intake process and synthesize the interview output into a redesigned workflow.

D. Generate an optimized version of the intake process based on industry benchmarks, then compare it to the current process to identify gaps.

Correct Answer: A

Claude is most useful as an analytical partner that maps the as-is process, surfaces data-backed bottleneck hypotheses, and generates options for humans to evaluate—not as an autonomous optimizer or interviewer.

Question 54

You are an HR specialist reviewing data items proposed for inclusion in a Claude prompt for a routine task. Which two data items are appropriate to include in a Claude prompt? (Select two.)

A. a compensation band summary that includes employee names and current salary figures for a specific team

B. employee ID numbers and hire dates for the team roster included to help Claude personalize onboarding communications

C. an anonymized summary of an HR policy that the model will rephrase

D. a redacted job description that the model will adapt for a posting

E. accommodation request notes from an employee's HR file needed to draft a role adjustment memo

Correct Answer: C & D

Anonymized policy text and already-redacted job descriptions are appropriate inputs. Named compensation data, employee IDs, and accommodation notes are sensitive personnel information that should not be entered.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 55

You received a vague request to “look at our pricing.” After discovery, the goal is confirmed: produce a structured competitor-pricing summary the team can act on, not new pricing ideas. Which strategy best fits the clarified task?

A. Use a comparative analysis strategy that contrasts the company’s pricing against a single named competitor, since pairwise comparison produces the clearest output.

B. Use a research strategy that gathers structured information about competitor pricing, names sources, and notes confidence in each finding.

C. Use a divergent brainstorming approach to generate a wide range of possible competitor-pricing observations, then narrow to the most likely ones.

D. Use an open conversational strategy that explores competitor pricing iteratively across several prompts, allowing the structure to emerge from the conversation.

Correct Answer: B

A structured research strategy that captures sources and confidence levels matches the clarified goal of an actionable competitor-pricing summary rather than ideation or open-ended exploration.

Question 56

You are an operations assistant asking Claude to summarize 200 weekly metric records across multiple regions. Which output format communicates the data most clearly?

A. a narrative summary organized by region, describing trends and notable records in prose

B. a bulleted list of observations grouped by region without consistent metrics across entries

C. a structured table with one record per row and one metric per column, sorted by region

D. a series of regional narrative briefs, each describing weekly performance in paragraph form

Correct Answer: C

When the underlying data are tabular, a structured table preserves comparability, enables sorting/filtering, and communicates volume far more clearly than prose narratives.

Question 57

You are a business analyst reviewing prompt drafts written by teammates. Which two elements belong in a well-structured prompt for a business task? (Select two.)

A. a clear statement of the task that the model must perform

B. a comprehensive list of company products and services to provide the model with business context

C. a friendly, conversational tone instruction to make responses feel more approachable

D. relevant context such as the audience and the goal of the task

E. a short personal anecdote to make the prompt feel more conversational

Correct Answer: A & D

Every effective business prompt needs a clear task statement and the context (audience, goal, constraints) required to execute it well. Exhaustive product lists, tone fluff, or personal anecdotes are optional and often distracting.

Question 58

You are evaluating whether a “redesign new-hire onboarding” request should be decomposed before prompting Claude. Which feature of the request most strongly indicates decomposition will help?

A. The request involves a single well-defined output with a clear input and a familiar format.

B. The request requires multiple distinct outputs: a process map, supporting materials, and a measurement plan.

C. The request covers content the associate has produced many times before in a familiar format.

D. The request is for a single structured document that can be produced from one set of inputs in one prompt.

Correct Answer: B

Decomposition is indicated when the request comprises several distinct deliverables that benefit from separate focus, sequencing, or quality criteria.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 59

You are evaluating proposed workflow changes against whether they meaningfully improve the workflow. Which two proposed changes meaningfully improve a recurring Claude workflow? (Select two.)

A. reorganizing the workflow document's section headings to improve navigation
B. updating the team's shared workspace name to reflect the new workflow process
C. adding a quality check on outputs before they enter the downstream process
D. labeling each workflow step with descriptive names to improve readability for new team members
E. extracting the standard reference material into a Project to avoid repeating it

Correct Answer: C & E

A quality gate before downstream use and the elimination of repeated reference material via a Project are substantive process improvements. Cosmetic renaming or heading reorganization are secondary.

Question 60

You have iterated a Claude prompt eight times, and the output quality has plateaued for the last four attempts. Which conclusion is most appropriate?

A. Iteration has reached diminishing returns and the next step is human review or a different approach.
B. Iteration should continue because a plateau often breaks after several more attempts.
C. Iteration should stop and the task should be abandoned without communicating to stakeholders.
D. Iteration should stop and the current output should be accepted as-is, without a human review of the remaining issues.

Correct Answer: A

When quality has stopped improving across multiple iterations, further prompting is unlikely to help. The rational next step is human review or a change of approach, not continued looping or silent abandonment.

Question 61

A product owner wants Claude to generate three alternative product roadmap options for the next quarter. The team will debate trade-offs later. Which prompting approach is most appropriate?

A. Ask Claude to pick the single best roadmap and justify why the other two are inferior.
B. Request three distinct roadmaps, each with explicit trade-offs, without ranking them.
C. Ask Claude to generate one roadmap and then iteratively refine it based on imagined stakeholder objections.
D. Request a single comprehensive roadmap that already balances all known constraints.

Correct Answer: B

When the goal is breadth and later human debate, the model should surface distinct options with trade-offs rather than collapsing to a single recommendation.

Question 62

You notice that Claude's answers in a long chat have started repeating earlier points and ignoring the latest instruction. Which recovery step should be tried first?

A. Switch immediately to a different model vendor.
B. Summarize the key decisions so far and issue a fresh, focused prompt that restates the current goal.
C. Delete the entire Project configuration and start over.
D. Increase the temperature setting to encourage more varied responses.

Correct Answer: B

Context degradation is best addressed by compressing history and re-anchoring the model with a clear, current goal before more drastic measures.

Question 63

A compliance officer is deciding whether a proposed Claude use case is in scope. The use case involves drafting internal policy FAQs from already-approved policy documents. Which decision is most consistent with typical organizational AI policies?

A. Reject the use case because any policy-related content is high-risk.
B. Approve the use case with mandatory human review before the FAQs are published internally.
C. Approve the use case for fully automated publication without review.
D. Require the FAQs to be written only by a licensed attorney using Claude as a silent assistant.

Correct Answer: B

Internal FAQs drawn from approved sources are low-to-moderate risk and are typically allowed when a human reviews the output before distribution.

Question 64

Which two elements are essential in a well-formed evaluation rubric for Claude-generated customer emails? (Select two.)

A. Whether the email uses the author's preferred greeting style.
B. Factual accuracy of any claims against the source ticket or knowledge base.
C. Whether the email exceeds 400 words regardless of content.
D. Alignment with the brand voice guide and required compliance statements.
E. Whether Claude spontaneously added an upsell offer.

Correct Answer: B & D

Accuracy against source material and adherence to brand/compliance requirements are core quality criteria; stylistic preferences and unsolicited upsells are secondary or out of scope.

Question 65

A team is configuring a Project that will be used by twelve people for weekly status reports. Which configuration practice best supports consistency?

A. Leave custom instructions empty so each user can prompt freely.
B. Place role, required sections, tone, and length constraints in the Project's custom instructions.
C. Rely solely on a shared Slack channel to remind people of the expected format.
D. Create a separate Project for each team member to avoid cross-contamination.

Correct Answer: B

Project-level custom instructions ensure every conversation inherits the same role, structure, tone, and constraints without relying on individual memory or external reminders.

Question 66

You are preparing a prompt that must reference a confidential pricing spreadsheet. Which data-handling step is required before including any content from the spreadsheet?

A. Upload the full spreadsheet and instruct Claude to ignore sensitive columns.
B. Redact or exclude any customer-specific or non-public pricing cells that the task does not require.
C. Convert the spreadsheet to a PDF so Claude cannot extract numbers precisely.
D. Ask Claude to confirm it will not store the data after the chat ends.

Correct Answer: B

Only the minimum necessary data should be provided; confidential or personally identifiable values that are not required for the task must be redacted or omitted.

Question 67

A manager observes that Claude outputs for a recurring task have begun citing an internal style guide that was retired six months ago. What does this signal most strongly?

A. The model's training data is outdated and cannot be fixed.
B. The Project's knowledge base or custom instructions still reference the retired guide and need updating.
C. Users are deliberately pasting the old guide into every prompt.
D. The temperature setting is too high, causing hallucinated citations.

Correct Answer: B

Persistent citation of retired guidance almost always means the Project still contains that material in its knowledge or instructions; updating the configuration resolves the drift.

Get Latest & Actual Exam Exam's Question and Answers from Dump4Exam.

https://dump4exam.vercel.app/

Question 68

Which hand-off design between Claude and a human reviewer is most reliable for high-stakes external communications?

A. The human reviewer decides ad-hoc what to check based on personal experience.
B. Explicit criteria define both what Claude must produce and what the human must verify before release.
C. Claude generates a self-checklist that the human is free to ignore.
D. The human only reviews the final paragraph for tone.

Correct Answer: B

Documented, dual-sided criteria create an auditable, consistent hand-off; ad-hoc or partial review leaves gaps.

Question 69

A knowledge worker needs Claude to perform exact arithmetic across three uploaded CSV files and return a verified totals table. Which feature is the best fit?

A. Standard chat with the files attached.
B. Artifacts only.
C. Code Execution on the uploaded files, followed by human verification of the results.
D. Memory import of previous calculations.

Correct Answer: C

Deterministic calculations belong in the Code Execution sandbox where actual code runs against the data; the language model alone is not reliable for precise multi-file arithmetic.

Question 70

When refining a prompt after a mediocre first output, which step should come first?

A. Immediately rewrite the entire prompt from scratch.
B. Identify the specific deficiencies in the current output relative to the success criteria.
C. Add three new example outputs to the prompt.
D. Switch to a more capable model before changing anything else.

Correct Answer: B

Diagnosis precedes intervention: you must know exactly what failed before you can target the prompt changes effectively.

Question 71

Which two risks are highest when Claude is used inside an HR performance-calibration workflow? (Select two.)

A. Inconsistent use of Oxford commas in written feedback.
B. Employment decisions made without clear human accountability.
C. Outputs that systematically disadvantage members of a protected class.
D. Slight variations in email signature formatting.
E. Occasional use of a slightly longer greeting.

Correct Answer: B & C

Material employment impact without accountability and systematic bias against protected groups are high-severity ethical and legal risks; formatting issues are not.

Question 72

A stakeholder asks for a one-sentence description of Claude's role in a project. Which framing best balances value and limitations?

A. "Claude does everything so the team can focus on strategy."
B. "Claude drafts and synthesizes under human direction; the team retains review and final decision rights."
C. "Claude is experimental and should not be relied upon."
D. "Claude replaces the need for junior analysts."

Correct Answer: B

Balanced framing names both the productive contribution and the continuing human accountability.

Question 73

You are designing a prompt for a constrained brainstorming task that must produce exactly eight ideas, each tied to one of four predefined customer segments. Which approach fits best?

A. Ask for twenty ideas and filter afterward.
B. State the exact count, the four segments, and require each idea to name its segment.
C. Ask for ideas without segment constraints so creativity is unconstrained.
D. Ask Claude to choose the eight strongest ideas from an unbounded list.

Correct Answer: B

When constraints define success, they belong in the prompt and each output item should explicitly demonstrate compliance.

Question 74

After a successful pilot, two improvement opportunities were identified. The core results were positive. What is the most appropriate next step?

A. Run an entirely new pilot focused only on the two opportunities.
B. Incorporate the improvements and proceed to broader rollout with close monitoring.
C. Delay rollout indefinitely until both opportunities are fully solved.
D. Discard the pilot results and start research from scratch.

Correct Answer: B

Positive core results justify advancing; remaining improvements can be addressed during monitored rollout rather than blocking progress.

Question 75

Which statement most accurately describes the context window?

A. Unlimited conversation history that persists across all future chats.
B. A fixed token budget that includes system instructions, history, attachments, and the current message.
C. A user-adjustable slider that controls how much history Claude sees.
D. The subset of history Claude decides is relevant, which can exceed the model's limit.

Correct Answer: B

The context window is a hard token limit on everything the model can attend to in a single turn.

Question 76

A team member wants to put full employee salary bands and names into a Claude prompt to generate personalized compensation letters. What is the correct response?

A. Proceed if the letters will only be used internally.
B. Redact names and exact figures; supply only the policy rules and required structure.
C. Use Incognito mode so the data is not retained.
D. Ask Claude to anonymize the data after it has been uploaded.

Correct Answer: B

Named compensation data is highly sensitive; only the minimum necessary non-identifying policy information should be supplied.

Question 77

Which two items belong on a prompt-quality checklist? (Select two.)

A. Whether the prompt contains the author's favorite quotation.
B. Whether the prompt states a clear task and required deliverable.
C. Whether the prompt supplies relevant context (audience, goal, constraints).
D. Whether the prompt is longer than 800 words.
E. Whether the prompt lists every team member's email address.

Correct Answer: B & C

Clear task/deliverable and sufficient context are foundational; length quotas and personal flourishes are not quality criteria.

Question 78

Claude has produced a report that cites a growth figure appearing in three secondary articles, none of which link to a primary source. What is the correct validation action?

A. Accept the figure because three independent articles agree.
B. Locate and verify the figure in the original primary study or authoritative source.
C. Average the three slightly different numbers reported.
D. Remove the citation and present the figure as common knowledge.

Correct Answer: B

Secondary repetition is not verification; the primary source must be checked.

Question 79

For a living one-page operating procedure that will be edited and reused for months, which output format is most appropriate?

A. A chat response that is copied into email each time.
B. An Artifact that can be opened, edited, and versioned as a stable document.
C. A series of numbered steps left only inside the original chat.
D. A PDF screenshot of the chat window.

Correct Answer: B

Artifacts are designed to be durable, editable working documents—exactly what a living procedure requires.

Question 80

When applying organizational AI policy to a new use case, which step comes first?

A. Approve or reject the use case.
B. Document the decision in the compliance register.
C. Identify which policy provisions apply to the proposed use case.
D. Compare the use case against every policy document in the company.

Correct Answer: C

You must first determine relevance before comparison or decision-making can occur.

Question 81

A Claude-generated customer health report covers all required topics but addresses only one of three mandated risk dimensions in the renewal-risk section. What is the best conclusion?

A. The report fully meets the specification because every topic heading is present.
B. The renewal-risk section is under-scoped and should be expanded before delivery.
C. Completeness cannot be judged without customer feedback.
D. The missing dimensions can be ignored because the rest of the report is strong.

Correct Answer: B

Presence of a section is insufficient when the specification requires multi-dimensional coverage; the gap must be closed.

Question 82

Which two criteria most directly inform whether a workflow step should be delegated to Claude? (Select two.)

A. How colorful the process diagram is.
B. Whether the step requires human creativity, empathy, or high-stakes judgment.
C. How long the current process has existed unchanged.
D. The reversibility of the step and the consequence of an error.
E. The job title of the person who currently performs the step.

Correct Answer: B & D

Delegation decisions turn on uniquely human capabilities and on risk (reversibility × impact), not on diagram aesthetics or tenure.

Question 83

A prompt asks Claude to “act as a senior researcher” but does not constrain it to the supplied source documents. The output introduces plausible-sounding facts absent from those sources. What is the most direct root cause?

A. The model is inherently incapable of staying on source.
B. The prompt lacks an explicit constraint to use only facts present in the supplied sources.
C. The temperature setting was left at the default.
D. The role “senior researcher” forces invention of new facts.

Correct Answer: B

Without a source-boundary constraint, the model will fill gaps with trained knowledge or plausible invention.

Question 84

For a time-constrained investor update, which narrative structure is most appropriate?

A. Chronological recap of the quarter, reaching the headline result near the end.
B. Lead with the headline result, present key drivers concisely, close with forward outlook.
C. Lead with operational anecdotes, then financial results.
D. Present only the forward outlook and omit historical results.

Correct Answer: B

Investors need the bottom line first, then the concise explanation, then the forward view.

Question 85

Which two evaluation criteria are valid for a Claude-generated business brief? (Select two.)

A. Total word count matching an industry average.
B. Factual accuracy of claims against the supplied source material.
C. Presence of the author’s favorite transitional phrase.
D. Alignment with the requested format and length constraints.
E. Whether Claude added an unsolicited competitive analysis.

Correct Answer: B & D

Accuracy against sources and fidelity to the requested format/length are core; stylistic idiosyncrasies and unsolicited extras are not.

Question 86

A finance manager needs deterministic calculations across a multi-tab workbook. Which Claude feature should be selected?

A. Standard chat prompt with the file attached.
B. Research feature.
C. Artifacts only.
D. Code Execution that runs code against the uploaded file and produces verifiable outputs.

Correct Answer: D

Only Code Execution provides actual deterministic computation on the file contents.

Question 87

Claude’s first response is factually correct but uses terminology that conflicts with the organization’s glossary. What is the most direct fix?

A. Manually find-and-replace terms after every generation.
B. Provide the glossary and instruct Claude to use only those terms.
C. Ask Claude to choose whatever terminology it prefers.
D. Ignore the inconsistency because the facts are correct.

Correct Answer: B

Supplying the authoritative glossary and requiring exclusive use prevents terminology drift at generation time.

Question 88

An operations analyst has process documentation and cycle-time data. How can Claude best support process optimization?

A. Autonomously redesign the process and implement the changes.
B. Map the current process, surface data-backed bottleneck hypotheses, and propose options for human review.
C. Interview every team member via Claude and rewrite the process from those interviews alone.
D. Generate an industry-benchmark process and force the team to adopt it.

Correct Answer: B

Claude is most effective as an analytical partner that surfaces options; humans retain design and implementation authority.

Question 89

Which two data items are appropriate to include in a Claude prompt for a routine HR task? (Select two.)

A. Named employee salary figures.
B. An anonymized summary of an HR policy to be rephrased.
C. A redacted job description to be adapted for a posting.
D. Accommodation request notes from a personnel file.
E. Full employee ID numbers and home addresses.

Correct Answer: B & C

Anonymized policy text and already-redacted job descriptions are appropriate; named compensation and sensitive personnel data are not.

Question 90

After clarifying that the goal is a structured competitor-pricing summary (not new ideas), which strategy fits best?

A. Divergent brainstorming of many possible observations.
B. A research strategy that gathers structured pricing data, names sources, and notes confidence.
C. Open-ended conversation that lets structure emerge organically.
D. Comparative analysis against a single competitor only.

Correct Answer: B

A structured research approach with sources and confidence levels matches the clarified goal of an actionable summary.

Question 91

When summarizing 200 weekly metric records across regions, which output format communicates most clearly?

A. Long narrative paragraphs organized by region.
B. A structured table with consistent columns, one record per row, sorted by region.
C. A bulleted list of free-form observations without aligned metrics.
D. Separate narrative briefs for each region with no common structure.

Correct Answer: B

Tabular data is most clearly communicated in a consistent table that supports comparison and sorting.

Question 92

Which two elements belong in a well-structured business prompt? (Select two.)

A. A clear statement of the task the model must perform.
B. A complete catalog of every company product.
C. Relevant context such as audience and goal.
D. A personal anecdote to make the prompt feel friendly.
E. An instruction to use a casual tone regardless of audience.

Correct Answer: A & C

Task clarity and relevant context are essential; exhaustive catalogs and personal stories are usually noise.

Question 93

A request asks for a process map, supporting materials, and a measurement plan. What does this feature indicate?

A. The request is simple enough for a single prompt.
B. The request should be decomposed into distinct outputs before prompting.
C. The request can be ignored because it is too large.
D. The request should be handled entirely by Code Execution.

Correct Answer: B

Multiple distinct deliverables benefit from decomposition so each can receive focused attention and quality criteria.

Question 94

Which two proposed changes meaningfully improve a recurring Claude workflow? (Select two.)

A. Renaming the shared workspace for aesthetic reasons.
B. Adding a quality check on outputs before they enter the downstream process.
C. Extracting standard reference material into a Project so it is not re-pasted every time.
D. Changing the font of the workflow document.
E. Reordering section headings without changing content or controls.

Correct Answer: B & C

A quality gate and elimination of repeated reference material are substantive improvements; cosmetic changes are not.

Question 95

After eight prompt iterations with no further quality gain, what is the appropriate conclusion?

A. Keep iterating; plateaus usually break after a few more tries.
B. Iteration has reached diminishing returns; move to human review or a different approach.
C. Accept the current output without further human review.
D. Abandon the task silently.

Correct Answer: B

Continued prompting after a clear plateau wastes effort; human judgment or a new strategy is required.

Question 96

A user wants Claude to draft an external press release that will be published without further human editing. Is this appropriate?

A. Yes, because Claude is highly capable at writing.
B. No; external press releases require human review and approval before publication.
C. Yes, if the temperature is set to zero.
D. Yes, provided the release is shorter than 300 words.

Correct Answer: B

High-visibility external communications carry reputational and legal risk and must retain human accountability.

Question 97

Which practice best reflects the Diligence competency of the AI Fluency Framework?

A. Applying policy only when usage is likely to be audited.
B. Completing a one-time policy acknowledgment at onboarding and never revisiting it.
C. Consistently applying policy, identifying gaps between practice and policy, and closing those gaps over time.
D. Delegating all policy questions to a central team and taking no personal responsibility.

Correct Answer: C

Diligence is a sustained habit of alignment, gap detection, and corrective action.

Question 98

More capable Claude models (e.g., Opus) compared with lighter models (e.g., Haiku) generally:

A. Consume less of the rate limit and run faster.
B. Consume more of the rate limit and run more slowly, while offering higher reasoning quality.
C. Have identical speed and rate-limit consumption; only quality differs.
D. Require multiple passes to match lighter-model quality.

Correct Answer: B

Higher capability comes with higher latency and greater rate-limit consumption—the fundamental trade-off.

Question 99

Two secondary sources give conflicting dates for the same event. What is the correct fact-checking action?

A. Choose the more recent secondary source.
B. Average the two dates.
C. Locate a primary or authoritative source and use the date it confirms.
D. Prefer the source with the longer citation.

Correct Answer: C

Conflicts between secondary sources are resolved by consulting a primary or authoritative source.

Question 100

A Project's custom instructions tell Claude to "be casual and offer goodwill credits freely." Recent drafts violate the brand voice guide and the credit policy. What is the best configuration fix?

A. Add a sentence telling Claude to "also consult the attached policies."
B. Replace the vague instructions with explicit brand-voice attributes, length expectations, and a rule that credits are offered only when the eligibility policy permits.
C. Move the policies into the knowledge base and leave the original instructions unchanged.
D. Disable custom instructions entirely.

Correct Answer: B

Explicit, enforceable constraints outperform vague instructions plus a hope that the model will consult documents.

Question 101

Which recovery action is least appropriate as a first response when conversation quality degrades?

A. Summarize state and continue with a focused follow-up.
B. Immediately replace Claude with a competitor's model.
C. Restate the current goal clearly.
D. Trim irrelevant history before the next turn.

Correct Answer: B

Switching vendors is a heavy, last-resort step; lighter recovery actions should be tried first.

Question 102

A request is for a single, well-defined deliverable with familiar inputs and format. Does it need decomposition?

A. Yes, every request should be decomposed.
B. No; a single coherent deliverable can usually be handled in one well-structured prompt.
C. Yes, because decomposition always improves quality.
D. Only if the user is new to Claude.

Correct Answer: B

Decomposition is indicated by multiple distinct outputs or conflicting success criteria, not by default.

Question 103

Which statement about Memory imports is most accurate?

A. Imports are guaranteed to transfer every detail perfectly.
B. Imports are experimental; some content may not be incorporated and can be added manually as a fallback.
C. Imports overwrite all existing memories and cannot be partial.
D. Imported memories are stored in a completely inaccessible separate store.

Correct Answer: B

Anthropic documents Memory imports as experimental with possible incomplete incorporation; manual addition is the docum

Question 104

A team wants Claude to generate a structured status update from meeting notes. Is this a suitable use case?

A. No, because status updates are too important for AI.
B. Yes; drafting structured updates from notes is a classic high-value, human-supervised task.
C. Only if the update will never be read by executives.
D. Only if Code Execution is used.

Correct Answer: B

Synthesis and drafting under human review is precisely the kind of work Claude is well suited to support.

Question 105

When a Claude output skips one of three explicitly required questions, which prompt element most needs strengthening?

A. The persona/role assignment.
B. The task statement so that it enumerates all three questions and requires an answer to each.
C. The temperature setting.
D. The length of the system prompt.

Correct Answer: B

Missing required elements are most directly fixed by making those elements explicit and non-optional in the task statement.

Question 106

Which practice best supports long-term Project effectiveness?

A. Never touch the configuration once it works.
B. Periodically review and update instructions, knowledge, and standards because the real world changes.
C. Update only when a senior leader complains.
D. Create a new Project every month and abandon the old one.

Correct Answer: B

Projects drift as policies, terminology, and source material evolve; periodic review keeps them current.

Question 107

A demographic generalization about purchasing behavior appears in an internal marketing brief. What is the most appropriate response?

A. Keep it because the brief is internal only.
B. Add a disclaimer and leave the generalization unchanged.
C. Revise the text to focus on observed behaviors and validate against actual data.
D. Delete the entire segment description.

Correct Answer: C

Replacing unsupported demographic generalizations with data-backed behavioral observations improves both accuracy and fairness.

Question 108

Over-decomposition of a board-memo request into fifteen tiny steps produced a disjointed result. What is the best remedy?

A. Add more steps for even finer control.
B. Consolidate related steps into fewer cohesive sections that group naturally connected ideas.
C. Keep all fifteen steps but number them differently.
D. Switch to a lighter model.

Correct Answer: B

Re-grouping by conceptual cohesion restores narrative flow while still keeping the task manageable.

Question 109

An organization’s policy explicitly prohibits entering ongoing investigation information into AI tools. What is the compliant action?

A. Enter a paraphrased version that removes names.
B. Use Incognito chat because it does not retain data.
C. Escalate for an approved alternative and do not enter the investigation information.
D. Wait until the investigation closes and then enter the full history.

Correct Answer: C

An explicit prohibition leaves no room for work-arounds; escalation and non-entry is the only compliant path.

Question 110

Which two signals most strongly indicate that a Project configuration needs updating? (Select two.)

A. Outputs increasingly reference retired terminology or outdated source guidance.
B. Chat volume has declined for two weeks.
C. Users have begun using ad-hoc chats for tasks that fall inside the Project’s intended scope.
D. Average output length has increased by 10 percent.
E. One user prefers a different greeting style.

Correct Answer: A & C

Outdated references and circumvention via ad-hoc chats are direct signals of configuration drift; volume or length changes are weaker indicators.

THANK YOU

Best wishes for your exam.

You have put in the effort. Stay focused, trust your preparation, and take the next step with confidence.

- Review key topics
- Stay calm and focused
- Believe in your progress
